ENDURA-FORM

MULTI PURPOSE CONSTRUCTION PANELS

WASH PIT / MAINTENANCE FACILITY APPLICATION

Custom Designed and Built for Your Requirements.
Easy to Build, Movable, Reusable and Heatable

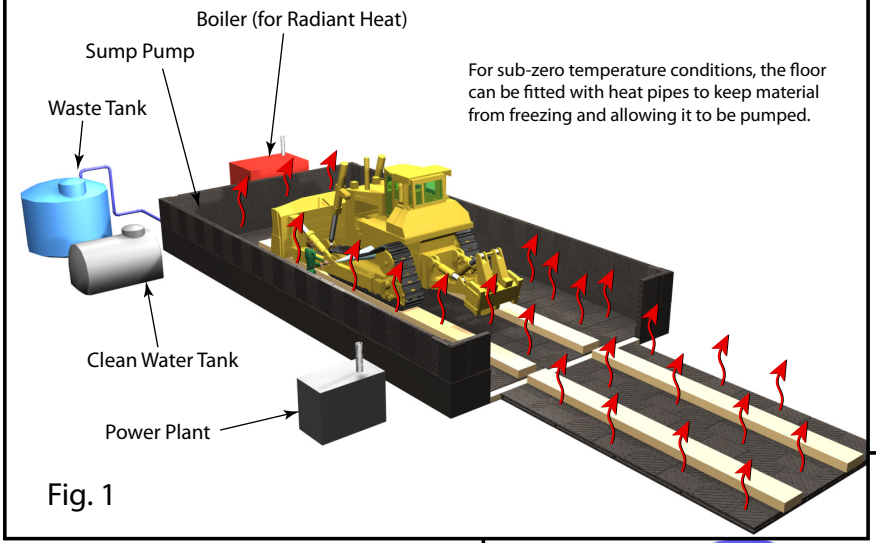

Fig. 1

The basic **Endura-Form** Wash Pit / Maintenance facility can built to any size and customized to meet whatever your requirements. The **Endura-Form** panels are extremely strong and tough - easy to assemble and disassemble, completely reusable and recyclable. The best part is, the panels are designed to acommodate pipes or cabling to provide heating and cooling, indoor or outdoor in the toughest environments.

The basic **Endura-Form** Wash Pit / Maintenance facility can easily be designed for any size you need! Accommodate expansion to include roofs, doors, power etc. Great not only for equipment washing but for all your maintenance facility requirements. The building can be easily transported, erected, dismantled, moved and re-erected with ease.

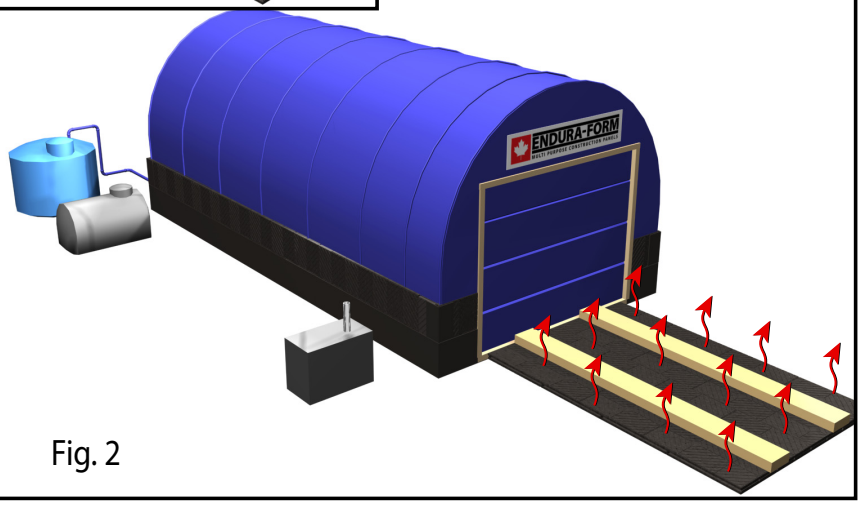

Fig. 2

Everyone is concerned with the environmental effects of their work. **Endura-Form** panels can be used to easily build a temporary wash pit for equipment in places where all waste must be collected and dealt with in accordance with environmental rules.
The floor is graded to allow the flow of water / dirt / oils etc to flow to a sump to be pumped to a holding tank, settling pond or treatment area as required. In cold weather conditions, heating pipes can be installed to allow the floor to be heated. Temporary cover can also be placed over it for maximum efficiency year round.
Endura-Form panels are super-strong and can handle the toughest punishment The **Endura-Form** panels are made of recycle material, environment friendly and 100 % portable.

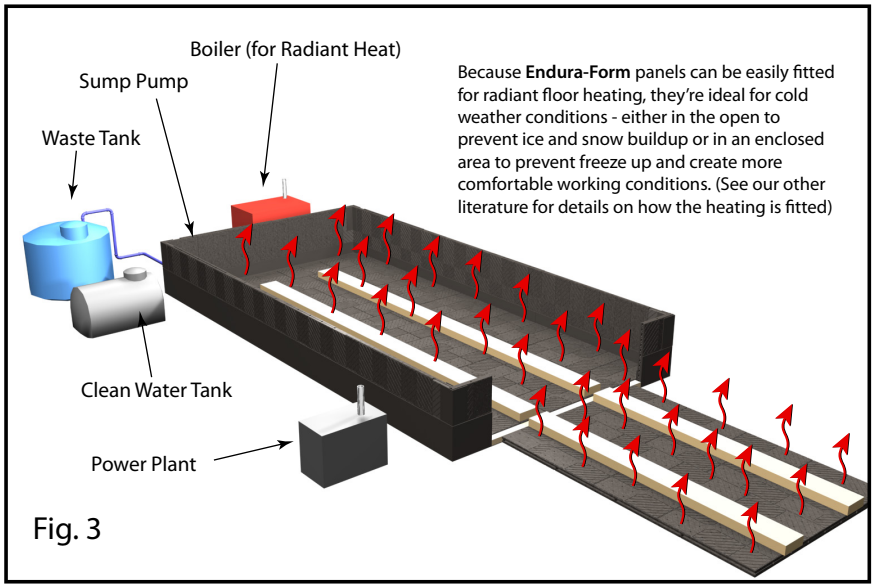
MULTI PURPOSE CONSTRUCTION PANELS

WASH PIT / MAINTENANCE FACILITY APPLICATION



Because **Endura-Form** panels can be easily fitted for radiant floor heating, they're ideal for cold weather conditions - either in the open to prevent ice and snow buildup or in an enclosed area to prevent freeze up and create more comfortable working conditions. (See our other literature for details on how the heating is fitted)

Third of three 10' x 16' Endura-Form deck sections, connected with the second by the connector strip. All three strips form a solid floor that will not move. There is a space at the sump end to provide a drain reservoir.

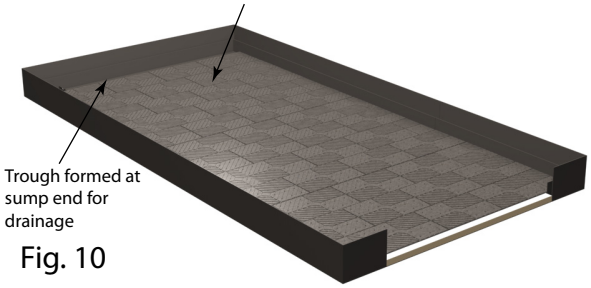

Fig. 10

Walls made up of overlapping Endura-Form panels are fitted in the tray's integral wall channels and bolted right through for maximum strength. The walls prevent overspray and provide a wind break. The walls can be made as high as necessary.
